

Top Tip: Removing Egg Shells from Mixtures

How many times have you cracked an egg and some of the shell ends up in your bowl? You end up spending countless minutes trying to fish it out, before you give up and just pretend its not there (or is that just me? :))

Solution: Use one of the larger egg shells to scoop it out. Fail Proof! No more chasing a small piece of shell around and around the bowl or biting into something unexpectedly crunchy around the dining room table :)
